Lahore, Punjab, Pakistan | 0310-4462412 | roshaanumar17@gmail.com | [linkedin.com/in/roshaan-umar](https://www.linkedin.com/in/roshaan-umar) | github.com/roshaanumar

PROFESSIONAL SUMMARY

Computer Science undergraduate (CGPA 3.71/4.00, Dean's Honour List) specializing in Database Design and C++/OOP development. Hands-on experience building relational database systems (MySQL, Oracle, XAMPP) using ERD modeling and 3NF normalization, plus a completed inventory-management internship in a manufacturing environment. Comfortable across the SDLC from schema design and data entry to testing and stakeholder presentations. Seeking a Software Engineering / Database Development internship to apply strong analytical and problem-solving skills to real-world systems.

TECHNICAL SKILLS

- **Programming & OOP:** Python (in progress), C++, Object-Oriented Programming, Dev-C++, Data Structures (fundamentals), Debugging
- **Databases:** MySQL, Oracle Database, XAMPP, ERD Modeling, Database Normalization (3NF), SQL Querying, Schema Design
- **Tools & Platforms:** Cisco Packet Tracer (Networking Fundamentals), VMware Workstation (Virtualization), MS Office
- **Core Competencies:** Problem Solving, Time Management, Cross-functional Collaboration, Technical Communication, Fast Learner

EXPERIENCE

Intern, Al-Quresh Fabrics (PVT) Ltd.

Aug 2025 - Sep 2025

Faisalabad, Punjab, Pakistan

- Assisted the IT department in designing an Oracle database schema to replace manual fabric-inventory tracking, mapping entities/relationships, building test tables, and entering validation data to deliver a working schema draft that let staff retrieve stock records digitally and directly supported the department's database-migration plan.
- Gathered and digitized inventory data into the new system, and prepared and delivered 2 project-status presentations to senior staff, improving cross-team visibility into project goals.
- Coordinated with 4-5 team members daily to keep workflow and workspace organization on schedule.

ACADEMIC & INDEPENDENT PROJECTS

Campus Cafeteria Order Management System | C++, Object-Oriented Programming (OOP), Dev-C++, File Handling

- Designed and coded an OOP-based order-management application in C++ (Dev-C++) as a university project to replace the campus cafeteria's slow, error-prone manual order-taking process, implementing order capture, item pricing, and automated bill calculation.
- Produced a functional desktop prototype that replaced manual order tracking with a structured, class-based workflow, reducing calculation errors.

University Management System Database | MySQL, XAMPP, SQL, ERD Modeling, Database Normalization (3NF)

- Built a relational database in MySQL via XAMPP as a university project to centralize student, course, and faculty records that had previously been scattered across spreadsheets, modeling the system with an ERD and normalizing all tables to 3NF to eliminate redundancy.
- Delivered a normalized, fully query-able database prototype demonstrating end-to-end database design competency.

Emotion Mirror: AI-Powered Autism Early-Detection Prototype | HTML, CSS, JavaScript, Python, FastAPI, OpenCV

- Designed and implemented the "Emotion Mirror" emotion-recognition module within a cross-functional team for a Software Project Management course, supporting the group's Final Year Project with an accessible, web-based autism-screening feature, applying software project management practices across scope, timeline, and documentation.
- Delivered a functional module now integrated into the ongoing FYP, contributing a core feature to an assistive-technology prototype.

EDUCATION

Bachelor of Science, Computer Science

Expected 02/2027

The University of Lahore

- CGPA: 3.71/4.00 | Semester 6 SGPA: 4.00/4.00 | Dean's Honour List (2023)

High School Diploma

09/2023

The Punjab Group of Colleges, Lahore

- Grade: A (2021-2023)
